**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

Continuation of 3. NOTE:

The new claims include new limitations not previously considered.

Applicants arguments to Uetani were addressed in the Final Rejection it being additionally noted the language “improved adhesive characteristics” does not limit the claim to any particular adhesive composition over another particular adhesive composition.

Applicants arguments to Teiichi were addressed in the Final Rejection it being again noted paragraph 131 of Teiichi specifically teaches the adhesive composition is dissolved or dispersed in a solvent and paragraph 137 specifically teaches the solvent for the varnish is acetone.

Applicants arguments to Ruiz were addressed in the Final Rejection it being again noted the claims do not require de-bonding the adhesive and there is nothing in applicants specification describing the term “de-bondable” with reference to adhesives as necessarily excluding permanent adhesives and such is not implied particularly when the specification demonstrates super glue, an adhesive readily considered “permanent” by one of ordinary skill in the art, as debondable.
